

Performance Test Consultant

You support our clients with the definition and execution of performance and load tests in an heterogeneous environment based on the clients current QA process.

Experience

- 2 Years performance testing
- Experience with at least one test tool such as LoadRunner, WinRunner and QALoad
- J2EE, Web servers, and HTTP
- Multi-tier systems and intercommunication
- OS resource management
- Unix, shell scripting and Perl [optional]
- Databases, design and optimization [optional]

Responsibilities

- Doing technical analysis to identify and remove the bottlenecks
- Executing test cases using a test plan and matrix for performance engineering

Requirements

- Solid IT knowledge based on a University degree or similar
- Good ability to communicate with the development team and report the status suitably
- Strong oral and written communication skills in English and in German
- Sound knowledge of testing practices particular for performance testing methodology, measurements, and key performance indicators
