GREENLIFF

Automation
Software Engineer

You will join our product development team to build a framework for distributed and automated test case execution and contribute to the core components. Additionally, you will help our clients to develop and execute test cases.

Experience

- Java and C
- .NET, Python [optional]
- UNIX shell scripts
- Object oriented design and implementation
- Heterogeneous (UNIX, Windows) and distributed development environments
- Databases (MySQL) [optional]

Responsibilities

- Enhance and extend our plug-in architecture to integrate 3rd party test tools
- Enhance the presentation components
- Strengthen our core development team

Requirements

- Sound IT knowledge based on a University degree or similar
- Team worker with the ability to work autonomously
- Follow a structural and methodological approach
- Open to work with cutting-edge technologies
- Development experience [optional]

If you feel that your profile matches this description please send your curriculum vitae by post to Greenliff AG, Herr Jörg H. Bischof, Technoparkstrasse 1, 8005 Zürich, Switzerland, or by email to jobs@greenliff.com.
